

ABHISHEK PATIL

Computer Science and Engineering Student

☎ +91-9108497044 • ap7497493@gmail.com • <https://github.com/AbhishekPatil1310> • [Portfolio](#)

Summary

Detail-oriented Computer Science student and Full-Stack Developer skilled in the **MERN stack** and **Python (FastAPI)**. Hands-on experience building dynamic web applications, from a real-time user feedback system with **Node.js** and **MongoDB** to an AI-driven data logger with **FastAPI** and **SQL**. A creative problem-solver and quick learner, ready to contribute effectively to a collaborative development team

Education

M S Ramaiah University of Applied Sciences
B-Tech in Computer Science

Bengaluru
08/2021 - 06/2025

Skills

HTML; CSS, Flask, FastAPI, JavaScript; JWT, MongoDB, ExpressJS, Fastify, Python, React, Redux, Supabase S3, Three.js, Node.js, GitHub Git

Projects

Advestore

Advestore

- Built a full-stack web application to display ads to users and collect real-time feedback for improving ad relevance and engagement
- Developed frontend using ReactJS and Redux for dynamic ad experiences
- Implemented backend using Node.js, Fastify, and MongoDB to manage user profiles, ads, and feedback
- Integrated the Sightengine API to enable automated image moderation and compliance

FieldScribe AI: Automated Interaction Logging

Built a **full-stack HCP interaction logging app** with React/Redux frontend and FastAPI backend

- Developed a conversational AI agent using LangGraph and the Groq API to extract structured data (HCP name, sentiment, summary) from chat messages
- Designed a dual-mode React UI supporting both structured form entry and conversational chat logging.
- Implemented full CRUD features to create, view, update, and manage interaction logs.
- Used Redux for state management, ensuring consistency across forms, chat history, and editing workflows.
- Created a secure RESTful API with FastAPI, integrating with MySQL/PostgreSQL for reliable data storage.

Herbarium: A smart digital garden

Herbarium: A smart digital garden

- Built an interactive 3D virtual garden to explore medicinal plants with dynamic popups, quizzes, and AI assistant
- Developed a 3D interactive plant environment using React, Three.js, and GLTFLoader
- Managed plant data and user sessions with Node.js, Express, and MongoDB
- Stored 3D assets and images in AWS S3 for efficient delivery
- Added quiz-based gamification and JWT authentication
- Integrated a GPT-based AI assistant for herbal information support

Certificates

TRAINING ON WEBSITE DESIGN AND DEVELOPMENT INTERNSHIP

- iStudio

COMPLETING INTERNSHIP IN WEBSITE DESIGN AND DEVELOPMENT INTERNSHIP
